

EKYFLEX REPAIR TENDON

Support for tendons and ligaments

Tendons and ligaments, an alliance of delicate fibres subject to significant levels of stress, have the crucial attribute of being resistant and elastic. In horses being followed for tendon or ligament lesions, the promotion of quality cellular reconstruction (fibroblasts) and the stimulation of the synthesis of elastic agents (collagen type I, elastin) are vital.

EKYFLEX REPAIR TENDON unites EKYFLEX experience with Audevard's innovation based on high performance scientific studies.

EKYFLEX REPAIR TENDON supports the tendons, ligaments and tendon sheaths by soothing them. It promotes tissue reconstruction and optimises its elasticity.

Uses

Horses being followed for tendon, tendon sheath and ligament disorders. The administration of this product must be accompanied by advice from your vet.

Composition /kg

Fucus vesiculosus	16,7%	Bromelain	5,0%	Centella asiatica	1,3%
Vitamin A	58000 UI	Zinc	1,7g
